# 74F257A Quad 2-Input Multiplexer with 3-STATE Outputs

#### **General Description**

The 74F257A is a quad 2-input multiplexer with 3-STATE outputs. Four bits of data from two sources can be selected using a Common Data Select input. The four outputs present the selected data in true (non-inverted) form. The outputs may be switched to a high impedance state with a HIGH on the common Output Enable ( $\overline{OE}$ ) input, allowing

the outputs to interface directly with bus-oriented systems.

#### Features

- Multiplexer expansion by tying outputs together
- Non-inverting 3-STATE outputs
- Input clamp diodes limit high-speed termination effects

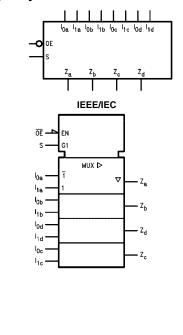

April 1988

**Revised September 2000** 

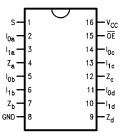

#### **Ordering Code:**

	Fackage Nulliber	ckage Number Package Description					
74F257ASC	M16A	16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150 Narrow

#### **Functional Description**

The 74F257A is a quad 2-input multiplexer with 3-STATE outputs. It selects four bits of data from two sources under control of a Common Data Select input. When the Select input is LOW, the  $l_{0x}$  inputs are selected and when Select is HIGH, the  $l_{1x}$  inputs are selected. The data on the selected inputs appears at the outputs in true (non-inverted) form. The device is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select input. The logic equation for the outputs is shown below:

$$Z_n = \overline{OE} \bullet (I_n \bullet S + I_{on} \bullet \overline{S})$$

When the Output Enable input  $(\overline{\text{OE}})$  is HIGH, the outputs are forced to a high impedance OFF state. If the outputs are tied together, all but one device must be in the high impedance state to avoid high currents that would exceed the maximum ratings. Designers should ensure the Output Enable signals to 3-STATE devices whose outputs are tied together are designed so there is no overlap.

#### Absolute Maximum Ratings(Note 1)

Storage Temperature	-65°C to +150°C
Ambient Temperature under Bias	-55°C to +125°C
Junction Temperature under Bias	-55°C to +150°C
V <sub>CC</sub> Pin Potential to Ground Pin	-0.5V to +7.0V
Input Voltage (Note 2)	-0.5V to +7.0V
Input Current (Note 2)	-30 mA to +5.0 mA
Voltage Applied to Output	
in HIGH State (with $V_{CC} = 0V$ )	
Standard Output	–0.5V to V <sub>CC</sub>
3-STATE Output	-0.5V to +5.5V
Current Applied to Output	
in LOW State (Max)	twice the rated I <sub>OL</sub> (mA)
ESD Last Passing Voltage (Min)	4000V

# Recommended Operating Conditions

Free Air Ambient Temperature Supply Voltage 74F257A

 $0^{\circ}C$  to  $+70^{\circ}C$ 

+4.5V to +5.5V

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.
